

Coding & Solution

Date	28 June 2026
Team ID	
Project Name	A Comprehensive Measure of Well-Being
Maximum Marks	5 Marks

Coding & Solution Summary

Field	Details
Repository Link / URL	https://github.com/bhavanaaki/Human-Development-Index-Prediction
Programming Language(s)	Python, HTML, CSS
Framework(s) Used	Flask, Scikit-learn
Key Features Implemented	• Human Development Index prediction using Machine Learning • Country selection through dropdown menu • Prediction based on Expected Years of Schooling • Prediction based on Mean Years of Schooling • Prediction based on Gross National Income per Capita • Automatic HDI category classification (Low, Medium, High, Very High) • Attractive Flask web interface • Model deployment using Render
Pending / Incomplete Features	No pending features. All planned functionalities have been implemented successfully.
Setup / Run Instructions	1. Clone the GitHub repository. 2. Install the required packages using requirements.txt. 3. Navigate to the Flask project folder. 4. Run the command: python app.py 5. Open the browser and visit: http://127.0.0.1:5000

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments:

The project follows good coding practices with proper modularization, meaningful naming conventions, inline comments, and version control using GitHub. The application has been successfully deployed on Render and tested with multiple input combinations to ensure accurate HDI prediction.
